SEATTLE, WASHINGTON

MAY 2026

Section One: Executive Summary

Our report focuses on analyzing organizational behavior in LUX Film Production, a student club here at the University of Washington. We got survey results from 24 past and current LUX club members in order to find out more information about organizational strengths, weaknesses, and retention problems.

Members of LUX have generally favorable views of the club. Our survey had high overall reliability among its various questions, which shows us that there is a lot of agreement and shared club sentiment among members. However, a key finding is that, while LUX members have positive beliefs in what the club stands for, many do not feel strongly attached to the club community. The survey question that received the weakest responses of all was "I feel like I am part of the family in this club" and four out five questions with the lowest rating were the measures of affective belonging.

Based on our findings from quantitative and qualitative analyses, five organizational recommendations are presented in this report. First, the process of quarterly selection of the scripts must be improved with greater accountability. Second, concerns about club officers must have a proper pathway to be reported. Third, crew meetings must be retooled in order to ensure that relationships are positively built ahead of filming. Fourth, a cohort mentoring program should be established to maintain affective commitment. Finally, a knowledge base should be established in order to preserve filmmaking knowhow between generations of students.

The organization has many strong aspects, such as high alignment with club values and consensus between group members. However, more work needs to be done to ensure that all members feel equally as committed and a part of the internal club community.

Section Two: Introduction

2.1 Overview

LUX Film Production Club is a registered student organization on UW campus dedicated to providing a space for students to engage in filmmaking. Armed with the motto of “Meet people, make films,” LUX hosts weekly meetings on various filmmaking topics, ranging from workshops on how to use film equipment to industry guest speakers to social events such as trivia or game nights. In addition to the weekly meetings, LUX also sponsors 4-6 short film productions each academic quarter, called quarterlies. These productions are entirely student-run, and go from pre-production to post-production to completion all over the course of the quarter. Between the quarterly productions and the weekly meetings, LUX seeks to provide ample opportunities for all interested students to both make new friends and work on a film that they can later show off to friends and family.

2.2 History

LUX was founded in February of 2016 by UW student Blake Rizzo. As a student in the Cinema and Media Studies major, he noticed that, while the coursework provided ample opportunity to discuss films, there was little opportunity to actually make films. So, he decided to found LUX.

Many of the ideas that built out LUX’s structure were pulled from Kong TV, a high school television broadcasting class that Rizzo was a part of. He sought “that same type of community of friends to make stuff with in college” which is why he decided to “start something

here” (qtd. In *Luminaries*). The early meetings mainly consisted of Rizzo explaining the club to new members, with the goal being set of making one film per quarter. Foundational officer Nicole Rader was one of the earliest voices advocating for the organizational structure of LUX to “make sure that there was a framework that could be used to facilitate people making stuff” (qtd. In *Luminaries*). Together with the help of the rest of the foundational officer team, they laid the groundwork for what the club was later to become.

In the ten years since its founding, LUX has grown exponentially, now boasting at least 100 regular members and creating 4-6 films per quarter. And as the filmmaking industry in Seattle continues to grow and evolve, these numbers keep going up with more and more students getting interested in video production.

2.3 Mission, Values, and Beliefs

LUX’s motto is “Meet people, make films.” This motto encapsulates everything that LUX sets out to do. The primary goal of “meet people” represents how LUX intends to create a community for student filmmakers. The club is intended to operate as a space for creatives of any type to come together, share ideas, and make new friends. There are no restrictions on major or year, all that is required to participate is an interest in filmmaking. The officers who facilitate LUX are intentional about making the space as inclusive as possible. Each week opens with a land acknowledgement that highlights an Indigenous piece of media as a way to center Indigenous voices. Recently, officers also cancelled a weekly meeting in favor of encouraging club members to attend a protest for trans rights, demonstrating a dedication to inclusivity and uplifting marginalized voices.

The secondary goal is “make films.” Going back to the founding of LUX, Rizzo did not want LUX to be a space where people talked about making films but neglected to actually create anything. So, the “make films” goal represents the practical, hands-on experience that the club promotes and tries to provide for all members. At the beginning of each quarter, anyone who is interested can pitch a <12 page script to the club. Club members then vote on which ones they want to see go into production. Selected scripts must then shoot, edit, and complete their film in time for the end-of-quarter screening hosted at the Regal Cinema in Northgate. This tight timeline ensures that films are actually completed, demonstrating LUX’s goal of “make films.”

2.4 Organizational Structure

LUX operates on a slightly hierarchical structure with around four levels, with three of those levels constituting the officer board that runs the club. At the top are the club co-presidents, of which there are typically two. Currently, these positions are held by seniors Bella Quilici and Cameron Smythe. Reporting to the co-presidents are the head of productions, head of marketing, and head of operations. These are the leaders of the committees within the officer board, each tasked with a specific realm of oversight.

Reporting to these committee heads are the general officer board members, who make up each committee. The productions committee oversees quarterly productions, ensuring that people get sorted onto a crew according to their preferences and acting as safety officers in case anything comes up on a set. The marketing committee is in charge of promoting the club, which includes managing club social media pages like Instagram and LinkedIn and updating the LUX website. The operations committee plans the weekly meetings, sourcing guest speakers, creating

slide decks, and running social events. Together, the three committees make up the officer board. The rest of the club constitutes the general members, who attend weekly meetings or participate in quarterly productions.

The club also has two advisors, one on-campus advisor and one off-campus advisor. These advisors do not do too much to actually run the club, but are rather present as a resource in case the officers need them. Currently, the on-campus advisor is Warren Etheridge, and the off-campus advisor is LUX founder Blake Rizzo.

Despite the hierarchical structure, LUX does its best to still be inclusive of all members and listen to everyone's voices. However, with how much the club has grown and the wide range of professional and personal interests present, it is not possible to always honor all ideas at once. Conflicts have arisen within the club before, hence why an analysis on LUX's organizational behavior would be a benefit to the longevity of the club.

Section Three: Methodology

3.1 Theoretical Framework

Our survey was based on five constructs from organizational behavior topics covered in class, as well as topics from our own separate research. First, we wanted to look at respondent's emotional attachment to the club (how connected and "part of the family" people feel). This builds on Meyer and Allen's (1991) model of why people stay in organizations. Second, we wanted to measure respondent's identification with the club's values, which is how much members agree with what the club stands for. Third, we included questions on satisfaction and intent to stay, to see if members enjoy the club and plan to keep showing up. Fourth, we included questions on leadership quality and regular members' views on how club officers have been performing. Finally, we wanted to measure community and cohesion, being how well members get along and welcome each other.

3.2 Sample and Procedure

We sent an anonymous Google Forms survey to the club's current members and recent alumni. We received 24 complete responses, including five first-year students, seven second-year students, seven third-year students, three fourth-year students, and two alumni. Eight of the respondents are officers; sixteen are general members. The tenure distribution is: one member with fewer than one quarter, twelve with one to three quarters, six with four to seven quarters, and five with eight or more quarters.

3.3 Survey

The survey contains twenty-four Likert questions rated on a five-point scale (1 = strongly disagree, 5 = strongly agree), five questions asking about demographics and behavioral engagement, and then five open-ended questions. The question categories were grouped into five conceptual groups before we collected the data. After we received the data, the scores of the quantitative Likert questions were calculated as the mean of replies within each group, and qualitative responses from the open-ended questions were reviewed manually.

3.4 Statistical Methods

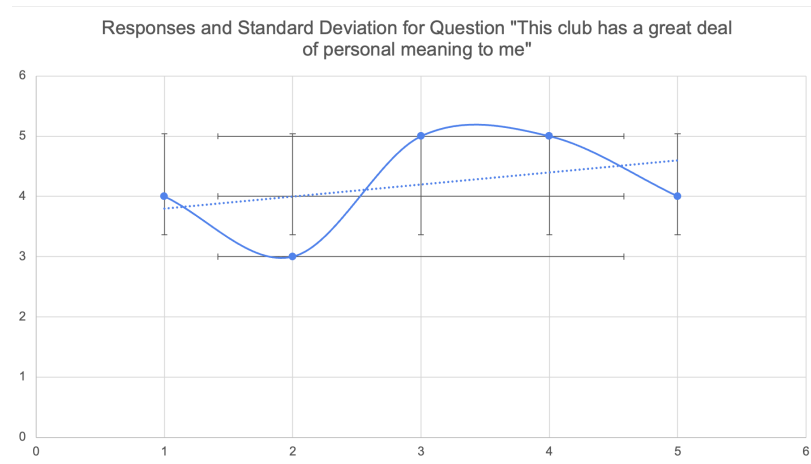

We did the majority of our analysis in Excel, with some additional data analysis in Alteryx Designer. With the information collected from individual respondents, we knew we had to have a methodical way to analyze the large amount of data. We began by doing our own research on how to best look at this data, and we decided to use the following popular statistical tests to analyze the data and prove its own internal reliability.

3.4.1 Standard Deviation

Standard deviation measures how much the data spreads out from the mean. It shows how consistent the data is in relation to itself. To calculate the standard deviation, Excel offered an automated formula which we used: =STDEV(). The full equation, however, is as follows:

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

Visually, the standard deviation can be represented on a graph such as the one below, where the blue line represents the Likert form responses (1-5) on the horizontal axis and the number of respondents answering each value on the vertical axis, an averaged trendline in dotted blue, with standard deviation ranges (computed by Excel) in the black bars:

3.4.2 Reliability (Cronbach's Alpha)

Chronbach's Alpha checks whether the questions in a group are really measuring the same thing. σ_i^2 is the variance of one item across people, and σ_{Σ}^2 is the variance of the total score (sum of all scores) across the different people who responded. The formula is:

$$\alpha = \left(\frac{k}{k-1} \right) \times \left(1 - \frac{\sum \sigma_i^2}{\sigma_{\Sigma}^2} \right)$$

In this formula, k is the number of items in the construct, σ_i^2 is the variance of item i, and σ_{Σ}^2 is the variance of the sum across respondents. Values of $\alpha \geq 0.70$ are considered to be acceptable, ≥ 0.80 as good, and ≥ 0.90 as excellent (Nunnally, 1978).

3.4.3 Bivariate Association (Pearson's r)

Pearson's r measures how strongly two things move together, on a scale of -1 to 1. We also report a p-value, which is the chance that a relationship this strong could have happened by accident:

$$r = \frac{\sum(x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum(x_i - \bar{x})^2 \times \sum(y_i - \bar{y})^2}}$$

We looked at statistical significance using the t-distribution with $(n - 2)$ degrees of freedom, where the formula is $t = \frac{r\sqrt{n-2}}{\sqrt{1-r^2}}$. The null hypothesis is $p = 0$. What the numbers mean:
 $r = 0.10$ small effect size, $= 0.30$ medium effect size, $= 0.50$ large effect sizes.

3.4.4 Group Comparison (Welch's t-Test)

Welch's t-test compares the average score of two groups (like officers vs. regular members) and tells us whether the difference is bigger than you'd expect by random chance:

$$t = \frac{M_1 - M_2}{\sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}}$$

Effect size was reported as Cohen's d using the pooled standard deviation:

$$d = \frac{M_1 - M_2}{SD_{pooled}}, \text{ where } SD_{pooled} = \sqrt{\frac{(n_1 - 1) \times s_1^2 + (n_2 - 1) \times s_2^2}{n_1 + n_2 - 2}}$$

Effect-size groupings: $d = 0.2$ small, $= 0.5$ medium, $= 0.8$ large (Cohen, 1988).

Section Four: Diagnoses of Key Issues

4.1 Reliability of the Survey

Before we can draw any conclusions, we need to make sure that the survey actually measures what we were intending for it to. According to our research on the best way to verify this, Cronbach's alpha is the standard check. Here are the scores for each group of questions and for the survey overall:

Construct	Items (k)	Cronbach's α	Interpretation
Affective Commitment	4	0.924	Excellent
Identification & Values	4	0.887	Good
Satisfaction & Retention	5	0.932	Excellent
Leadership Quality	6	0.957	Excellent
Community/Cohesion	5	0.851	Good
Overall (all 24 responses)	24	0.965	Excellent

Every group here passes the 0.7 threshold easily, and % score above 0.9. This means that when someone agreed with one question in a group, they also tended to agree with the others. The respondents were answering these questions coherently, and not just selecting random responses. This means that the survey data is internally reliable to itself.

4.2 Descriptive Findings

4.2.1 Construct-Level Averages

Each theme's score is on the same 1-5 scale. The average score across the 24 responses is 4.05, which is mostly positive. But the themes are not equal:

Construct	Mean	SD	Rank
Satisfaction & Retention	4.36	0.86	1 (highest)
Identification & Values	4.20	0.91	2
Leadership Quality	4.11	0.99	3
Community/Cohesion	4.07	0.85	4
Affective Commitment	3.42	1.12	5 (lowest)

There's a clear pattern here. Members are reporting high satisfaction with what they get out of the club (skills, experiences, how willing they are to recommend) and have a strong belief in the mission. However, their affective/emotional attachment to the club is a notable weak point in the data. This gap is the most important finding in our study and is examined in detail in section 4.5.

4.2.2 Highest and Lowest Rated Items

The five highest rated questions were:

1. "I would recommend this club to other students." (Average = 4.58, SD = 0.88)
2. "I believe in what this club is trying to accomplish." (Average = 4.54, SD = 0.78)
3. "The skills and experiences I've gained here are valuable to me." (Average = 4.46, SD = 0.93)
4. "I plan to remain an active member next school year." (Average = 4.42, SD = 1.18)
5. "Club leaders set a positive example for the rest of the members." (Average = 4.42, SD = 0.97)

The five lowest-rated items are:

1. "I feel like I am 'part of the family' in this club." (Average = 2.79, SD = 1.32)
2. "I feel a strong sense of belonging to this club." (Average = 3.50, SD = 1.10)
3. "New members are welcomed and integrated well." (Average = 3.58, SD = 1.21)
4. "I feel emotionally attached to this club." (Average = 3.67, SD = 1.20)
5. "This club has a great deal of personal meaning to me." (Average = 3.71, SD = 1.23)

Four of the five lowest-rated items measure affective belonging, the fifth measures integration of newcomers, which is very similar to belonging. This is not a random distribution, it shows that there is a very specific unhappiness in this particular area rather than generalized dissatisfaction.

4.3 Inferential Findings

4.3.1 Engagement is What Predicts Club Sentiment

We compared two behavior measures (how often members come to the club meetings, and whether they've worked on quarterly productions) against the survey scores overall. The relationships are strong, positive, and statistically significant.

Relationship	r	p	n
Attendance ↔ Overall sentiment	0.611	0.002 **	24
Attendance ↔ Affective Commitment	0.750	< 0.001 ***	24
Production participation ↔ Overall sentiment	0.634	< 0.001 ***	24

All three relationships exceed the Cohen statistic for a large effect ($r > 0.50$) and all are statistically significant at the normal $\alpha = 0.05$ level. This means that these relationships are very unlikely to be a coincidence. The attendance/affective/commitment correlation is particularly strong: it explains over half ($r^2 = 0.750^2 = 0.563 = 56.3\%$) of the variation of how people feel. The data doesn't exactly tell us whether showing up to the meetings makes you feel attached or whether feeling attached makes you show up to the meetings (probably both), but the evidence linking them is extremely strong.

4.3.2 Views on Leadership Quality and Retention

How members view their leaders is linked to almost everything else in the survey, but especially to whether the members plan to stay for next year:

Relationship	r	p	n
Leadership Quality ↔ Overall sentiment	0.873	< 0.001 ***	24
Leadership Quality ↔ Plan to remain	0.695	< 0.001 ***	24
Affective Commitment ↔ Plan to remain	0.516	0.010 *	24
Affective Commitment ↔ Would recommend	0.604	0.002 **	24
Community/Cohesion ↔ Plan to remain	0.423	0.040 *	24

A simple model of retention based on leadership quality yields:

If you square $r = 0.695$ (leadership quality to plan to remain), you get

$r^2 = 0.695^2 = 0.483025 = 48.30\%$. With $r^2 = 48.3\%$, this basically means that almost half of the variation in how much a person wants to stay with the club is accounted for by how they view the club leadership alone.

4.4 Qualitative Findings

Our survey had five open ended questions, and when we looked at the written responses, we had three themes come up over and over again. Each one matches a pattern in the numbers.

4.4.1 Theme 1: Cliquishness and Uneven Welcome

Multiple people who responded to our survey described the club's social environment as cliquish. One member said that the club operates "like a high school clique" and reported being "ostracized" for not aligning with a perceived core group. Another also stated that "it can feel cliquish" while saying that some grouping of friend groups is natural. A third said that filmmaker pitches are not treated the same depending on the submitter's social affiliation. One respondent even reported submitting a formal complaint against an officer whose behavior they considered harmful and said that the officer faced zero consequences and retained their leadership privileges. This is a serious organizational accountability claim that, even entirely regardless of whether it is accurate or not, shows that there is a major perceived failure of the club's complaint procedures.

This maps back to our data really well, where the affective commitment gap between officers (average "sense of belonging" score = 4.00) and general members (average "sense of belonging" score = 3.25) is the biggest construct-level difference in the dataset. Members aren't saying that leadership is bad, they're saying that the club social system has an "in group" where many people feel like they don't fully belong to that group.

4.4.2 Theme 2: Procedural Justice in Script Selection

Five respondents each raised concerns about how the film scripts get picked each quarter. The most common complaints that we found were that respondents feel like scripts are not actually read by voters, people vote for their friends' scripts over the best quality scripts, the turnaround is too short, and the result is a "popularity contest." One respondent wrote that they

had "only pitched for one quarter" and could already see the above issues clearly. This shows up in the data as well, about 12.5% of respondents disagreed with "decisions in the club are made fairly," which for our data group is a fairly high figure of disagreement.

The important thing to note here is that this complaint is not about the people, its just about the process itself. In our class lectures, we learned that even when organizational outcomes are fine in the end, an unfair process (even one that's even perceived to be unfair) reduces organizational commitment all on its own. That's likely what's happening here with the script selection.

4.4.3 Theme 3: Intergenerational Knowledge Loss

Two respondents brought up (without being asked) in their responses that the filmmaking knowledge leaves alongside with the graduating alumni when the experienced people graduate. One person suggested a shared wiki or knowledge base to keep the valuable skills in the club. Another person suggested that alumni come back and mentor newer members.

4.5 Integrated Discussion

4.5.1 The Belonging Gap

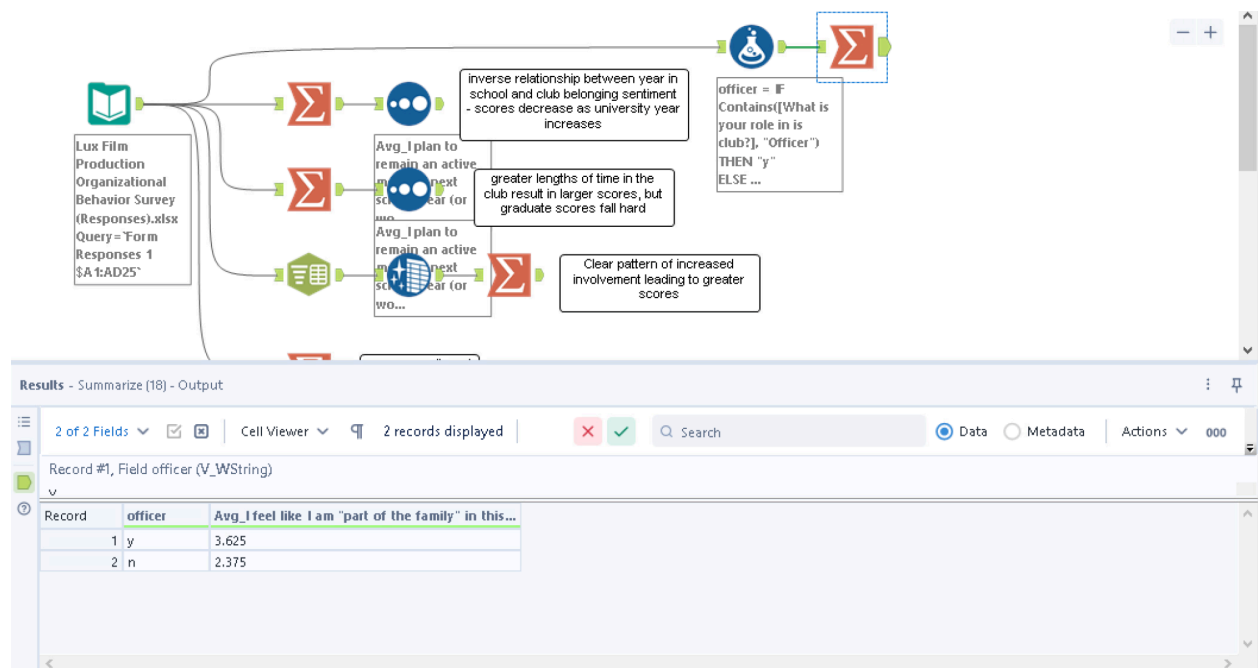

The biggest takeaway from our survey is that there's a mismatch between how members feel about the club itself, but how attached they are to it. Club members do believe in the club's mission and what the club's overall goal is (4.20 average), but many respondents don't feel like

they are a strong part of the community of the club (3.42 average). As we showed in section 4.1, the data is very reliable, so this gap is a real life issue.

In Meyer and Allen's framework, the club has a strong "I believe in this" organizational commitment but a much weaker "these are my people" commitment. Research has found that the second one (emotional attachment) is the strongest predictor of people sticking around, how willing they are to put in effort in the organization and do more than what's required, and recommending the organization to others.

4.5.2 The Officer Blind Spot

Officers report much higher affective commitment than regular members, but have basically the same feelings in terms of leadership quality and community as regular members. This means that officers are aware that they are doing a good job running the club well, but running the club well is not the same as all club members feeling at home. Schein's "Levels of Organizational Behavior" framework describes this as a difference between espoused values ("we are a welcoming community") and the actual real life experience for non-core members. The Alteryx Designer workflow output (see image below) shows the same pattern at the question level, where regular members rate the "part of the family" question at 2.375 average versus 3.625 average for the officers.

4.6 Limitations

While our data and findings are statistically solid, we want to acknowledge a few caveats and limitations to our data. First, our sample size of $n = 24$ is a small sample size, especially when you split the survey into subgroups (eg, regular member vs officer or split by year at UW). Second, because this is a one-time survey, we don't have any data on which way the cause runs (does showing up to club meetings make people feel attached, or does feeling attached make them show up?). Third, there's likely some self-selection bias, where members with strong opinions (in either direction) are more likely to fill out the survey and express those opinions, so there's a chance that those responses may be overrepresented at the extremes. Fourth, while we did have an anonymous survey sent out and results analyzed by a neutral third party individual not affiliated with the club in any way, the club is small enough that some respondents could have felt like club leaders may have attempted to guess who responded, which may have made respondents less forthcoming in their responses.

Section Five: Analysis Using Organizational Behavior

Frameworks

5.1 Overview

For the analysis of Organizational Behavior frameworks, we will first analyze the group mechanisms of leadership styles and team processes. Then we will examine the individual mechanisms of job satisfaction and ethics. Finally, we will see how group mechanisms and individual mechanisms result in the outcomes of affective commitment.

5.2 Group Mechanisms

In Organizational Behavior, group mechanisms are interpersonal structures of how individuals interact, work together, and function as a team.

5.2.1 Leadership Styles

Leadership styles are characterized by four transformative leadership behaviors: Idealized influence, inspirational motivation, intellectual stimulation, and individualized consideration.

Idealized influence is when leaders behave in ways that earn the admiration, trust, and respect of members, making them want to identify with and emulate the leaders. When participants of our survey were asked how much club members set a positive example for the rest of the members, the average response was 4.42/5, setting it as the fourth highest rated question.

Evidently, leaders are effective in idealized influence. Most members also rate leaders to be highly capable of running the club well in general.

Inspirational motivation occurs when leaders behave in ways that foster enthusiasm and commitment to a shared vision. Leaders appear to be committed to promoting the club's mission statement, which is, “Meet people, make films”. They are also intentional in creating social impacts beyond the club, acknowledging the Indigenous culture and protesting for transgender rights.

Intellectual stimulation is behaving in ways that challenge followers to be innovative and creative by questioning assumptions and reframing old situations in new ways. Leadership is effective at motivating members to create scripts and follow through with completing films. However, it appears that they lack in pushing members to be creative and innovative. Member feedback stated that because the club had restrictions on the kind of content that could be produced, films were limited to one or two genres, and often repetitive.

Finally, individualized consideration is behaving in ways that help followers achieve their potential through coaching, development, and mentoring. We found that upperclassmen contributed valuable skills and knowledge, but were less effective in passing that information on to underclassmen in the club, resulting in generational knowledge loss. Additionally, leaders should encourage and recognize member contributions more. In all aspects of leadership on the survey, making members feel recognized and appreciated for their contributions sat lowest, with an average rating of 3.38/5.

5.2.2 Team Processes

LUX is effective at avoiding team process loss through ensuring efficient brainstorming, writing, script selection, and film production. When it comes to taskwork processes, decision-making in script processes seems to be a point of frustration for many members. In the free response section of the survey, we asked members what was something that frustrated them or could be improved about the club. Six out of ten responses said that members would either not read scripts before voting, or scripts would be chosen based on the author's social connections and popularity rather than actual quality.

5.3 Individual Mechanisms

Individual mechanisms are a person's own psychological or physical processes that influence their performance and commitment. In this section, we will analyze two individual mechanisms: Job satisfaction and Ethics.

5.3.1 Job Satisfaction

Job satisfaction is the degree to which an individual is satisfied with their job depends on the value-perception theory and the three psychological states of satisfying work.

The value-perception theory argues that job satisfaction depends on whether or not an individual perceives their job provides them with things that they value. The survey responses strongly indicated that members aligned with the club's values and mission statement. Members

also strongly value the skills and experiences they have gained from the club, which makes their participation more fulfilling.

The three psychological states of satisfying work are meaningfulness of work, responsibility for outcomes, and knowledge of results. Club members have the opportunity to work on what they enjoy, which is film making. The skills and experience they gain are important to them, resulting in meaningful work. However, LUX is less effective at providing members with responsibility for club outcomes. Since there is dissatisfaction with the script-selection process, many members may feel like their voices are irrelevant, and don't make a difference in final decisions. This is also backed by the fact that members have lower ratings for feeling like their contributions are seen and heard, making their roles feel less important. However, LUX does provide its members with knowledge of results through their quarterly screenings of the produced films, which also builds community.

5.3.2 Ethics

As an individual mechanism, ethics applies to both members and leaders. A major determinant of ethics is justice. We examined three parts of justice. For procedural justice, we found that the script selection process was the biggest issue. There ought to be standard procedures that guarantee each script is being evaluated fairly without bias. Next, another major concern is interpersonal justice. Most notably, a member reported leadership abuse, but there was no accountability, or follow-through of consequences for the leader because they were in a central social role. Members need to have psychological safety to feel like they can speak up about concerns and issues without being marginalized, penalized (either formally or informally),

or humiliated. They should also have the psychological safety to present their ideas and script, knowing that they will be evaluated fairly and without bias.

5.4 Affective Commitment Outcomes

When we examine the organizational commitment outcomes, we found affective commitment to be the strongest factor, in both positive and negative ways. Affective commitment is loyalty to an organization based on emotional reasons. Members who had the strongest commitment were motivated by affective factors. Members who had the least commitment lacked affective factors. We will examine what makes members committed, and what marginalizes members based on affective commitment.

5.4.1 Strengths

It is apparent that higher levels of participation and engagement lead to higher levels of affective commitment. In Organizational Behavior, a correlation higher than 0.5 is considered strong. The correlation of attendance to affective commitment and overall sentiment are 0.750 and 0.611 respectively. Production participation also has a strong correlation of 0.634 to overall sentiment. Besides participation and engagement, leadership also leads to higher feelings of belongings. Officers reported higher levels of affective commitment than members. Those who were committed were strongly committed for sentimental and social reasons.

Intent to remain in the club was strongly related with how they viewed leadership quality.

Perceived leadership quality had the strongest correlation with sentiment, with a value of 0.873.

It also had a strong correlation to whether or not members planned to remain, with a value of 0.695. Perceived leadership quality had a moderate correlation to community and cohesion with a score of 0.423.

5.4.2 Weaknesses

Member commitment ratings were the weakness of all categories. All questions asking about affective commitment were rated 2.79 to 3.71. In comparison, identification, satisfaction, cohesion, and leadership were all rated above 4.00, except for one exception in leadership and one in cohesion. Questions on whether new members were accepted and welcomed had lower ratings, putting new members at higher risk for turnover. When asked whether or not they felt like part of the family at LUX, members gave the lowest average rating out of every other question, with a rating of 2.79/5. The erosion model suggests that members with fewer connections are more likely to leave. The existence of cliques in the club makes it more difficult to gain those connections. LUX should be wary of losing members who are not part of a clique. It would be more beneficial for leaders to set an example by welcoming new members and making substantial efforts to make them feel important and included in the larger social setting.

5.5 Conclusions

LUX is less effective at promoting affective commitment for all members, but when they do, it is effective. Officers and leaders have higher affective commitment than new members. Inclusion and participation build current commitment, but leadership quality is more important in motivating members to remain in the club.

Section Six: Recommendations

After looking through all the data from the survey we found five interventions that would improve or be helpful for LUX Film Production. Broken down into 3 problem areas, fixing script voting process, helping new members feel a sense of belonging & keeping seniors engaged. We tried to tie each recommendation to what we have learned and also keep them realistic enough for a volunteer officer board to go through with. We picked these specific recommendations because our data showed that members staying in the club depend on whether they identify with what LUX is standing for so this drove us to focusing on changes that are protecting the clubs mission versus just symbolic stuff like requiring meetings.

Recommendation 1: Fix the Script Voting Process

People that responded to our survey showed frustration on how scripts get voted on each quarter. Multiple different respondents said the same thing , that voters don't actually read the scripts and votes end up going to whoever has the most friends in the club. We plan on releasing the scripts earlier in the quarter to members so they can actually read them before the voting opens and also put a unique code word at the end of each script and have the members voting enter the code when they make their vote. If the code word isn't there the vote will not count. This helps make sure people actually read what they are voting on .

This connects to Chapter 7 in which we discussed procedural justice. Procedural justice is the perceived fairness of decision making processes. It has 6 rules that make a process feel fair including accuracy procedures that are based on accurate information, and consistency which makes sure procedures are the same across people and time. Right now the process that LUX has for voting doesn't follow either of those rules since there isn't an expectation that voters read the

scripts and votes get made without info needed to make sure they are good. Also the code word process makes the process consistent for everyone since every voter has to follow the same steps. Then it forces decisions to be based on actual engagement with the scripts. Our research data shows that people in the club will accept outcomes they don't love as long as they trust the process which means this could also help how members feel about the voting process even if lux picks the same scripts it would have picked anyway. The head of productions would be in charge of this.

Recommendation 2: Create an Independent Way to Report Concerns

About Officers

We also saw a respondent share that they filed a formal complaint with evidence against an officer and saw nothing be done after which is a serious concern and problem. The main issue here is members can't trust that complaints get handled fairly when officers are the ones investigating other officers. The recommendation for this is for LUX to set up a written system where complaints against officers go to someone outside of the officer board like an on campus advisor or the student organization office. If an officer is the person of complaint they should be out of the discussion. This new way of handling this should also be posted where club members can find it , creating a better sense of trust in the board.

This also aligns with chapter 7 with a focus on interpersonal and informational justice. When the complaints get no responses it breaks the respect and justification rules. This is because members aren't treated with sincerity and aren't given an explanation for what happened or what will. The biggest thing chapter 7 also mentions is trustworthiness which has 3 areas , ability, benevolence and integrity. Integrity is the most important in this situation since the

textbook defines it as leaders walking the talk so their actions are actually matching their words. The officers reviewing the reports and doing nothing about it shows a gap between what leaders are saying they may stand for and what actually happens which is unfair to members.

Re-routing the complaints to someone outside of the club is a clear and effective choice to build trust in the officers when handling issues in the club. Along with this the club needs to have a short code of conduct covering how members treat each other , harassment and conflicts of interest with consequences for each rule members would sign it at the start of each year

Recommendation 3: Make Crew Meetings Work

“I feel like I'm a part of the family in this club” got the lowest rating of 2.79 out of 5 and the officers rated it higher than other general members. Also following that up the open ended responses backed it up saying that the club is cliquey and that groups stick together on productions. LUX does have a crew meeting time built into weekly meeting and have been assigned through an algorithm but the problem is that a lot of members don't even show up to crew meetings.

The relationship and bonding that is supposed to happen doesn't actually. Three changes can help this. Make attendance required for crew members on an active production . Have directors follow a small agenda that can cover introductions , role assignments, a creative discussion of the script and logistics. And then tie skipping crew meetings to crew eligibility for the following quarter so that missing the meetings has a consequence.

Chapter 12 connects to this which covers team processes. There are categories and crew meetings lined up with what is called transition processes which are teamwork activities focused on prep for future work. These include mission analysis (analyzing what the team task is) ,

strategy formulation (developing a plan) and goal specification (prioritizing goals related to the mission). Crew meetings do this, they prep the team for the production before shooting starts. If people skip the meetings they skip the process meant to help them be successful. The agenda also helps give the meeting real purpose and attendance makes sure the transition processes work for all members not just the ones in friend groups.

Recommendation 4: Group Members in Cohorts

“New members are welcomed and integrated well” scored a 3.58 with 21% of members disagreeing. Members come into LUX one at a time and get pulled into whatever friend group they stick to first or they end up drifting from the club. The recommendation that makes sense for this is to have new members in the same quarter be grouped into a cohort example would be “spring 2026 cohort” with an officer assigned as their leader. They would have 3 planned get-togethers during their first quarter and a change to shadow a crew on a quarterly production.

This ties to chapter 3 which talks about organizational commitment. The chapter talks about 3 types of commitment, affective (the I want to stay type), continuance (I ought to stay), and normative (you stay since you feel you should) . The data from the survey shows that LUX has a stronger normative commitment if anything since the people believe in the mission but weak affective commitment since there isn't really emotional connection. Affective commitment is what should be focused on since it's tied to citizenship behaviors like helping others or going an extra mile. Affective commitment can come from the organization's community so if the member goes a long time without bonds they are less likely to stay. Cohorts gives the members a first chance at friends in the club right off the bat which builds that commitment.

Recommendation 5: LUX Knowledge Base

We also heard from a couple respondents that each time a classmate graduates filmmaking knowledge gets lost. Someone mentioned a LUX shared resource library and pointed to the fact that newer members may have a hard time figuring out roles without help. We think LUX should build an internal knowledge base on a shared platform (notion, shared drive). This would be broken down by roles and each would have their own page with an overview of it. Also would open up a new position for members “knowledge lead” to maintain it.

Chapter 16 discusses organizational culture. It goes over symbols, structures, language, stories, rituals, and ceremonies. The knowledge base aligns with stories the most since we define them as anecdotes, accounts, legends, and myths that are passed down within an organization. LUX film making knowledge just comes from people remembering things and passing them along casually which means a lot may be lost. A knowledge base will capture the stories in writing so they survive each year.

Section Seven: Implementation Challenges

7.1 Reformed Script Voting

Leadership within LUX already pushes hard to encourage reading of the scripts. It is reiterated on slides, verbally, and via Slack announcement that all members who vote need to read the scripts. There is only so much that can be done to change people's behavior. However, more concrete incentives to encourage the reading of the scripts might improve this issue. Providing scripts earlier would allow for more time, but would require that scripts be submitted and compiled earlier, which is an extra burden on the leadership team's time. However, we do not foresee this burden being very large provided that things get communicated out well enough in advance.

The inclusion of code words within scripts that must be correctly submitted for a vote to count would present a slightly greater challenge for implementation, as it would necessitate more work on the part of the officer team. There are already some slight challenges when it comes to managing and compiling all of the different scripts as they are sometimes submitted as different file types, which would present a hurdle when it comes to inserting code words. However, with planning and communication far enough in advance, this would still be manageable. The greater challenge would be that many members might skim the script just to find the code word and not actually read the script, which does not solve the initial problem. However, the inclusion of the code word at the very least requires that members open up the files and skim them, which is a step towards improvement as it knocks out the first step towards actually reading the script and

breaks down some of the executive dysfunction that prevents people from opening the files and reading the scripts.

7.2 Independent Grievance Channel

Given the interconnected nature of filmmaking and the organization, it would be extremely difficult to find willing and able club officers or members to manage an independent grievance channel who do not have any personal affiliations to other members of the officer board. The club is built around promoting positive interpersonal relationships, so nearly all members know each other personally at least to some extent. There is also a limited number of people who would be willing to put in the time and effort to manage conflicts to the necessary extent. However, at the very least, the responsibilities of investigating issues should be spread out among a greater number of people. In the past, it was largely the co-presidents (with some help from the Productions team) who investigated and dealt with issues. However, if a club member has a problem with someone who is close or affiliated with these individuals, the process would surely appear unfair. Many of these investigations also were conducted behind closed doors, as officers do not want issues to be public to the general membership. Greater communication and feedback with affected individuals when problems are brought up regarding what steps are being taken and what exactly is being investigated might assist in building trust and creating a sense of justice, even if it is not possible to bring in a truly neutral third party.

7.3 Crew Meetings

Making crew meetings mandatory would assist in the low attendance seen at LUX meetings. However, this is unrealistic given the busy schedules of LUX members. Sometimes there are unavoidable conflicts, and some of these conflicts might also be consistent across Wednesday meetings, which might prevent an active and willing member from attending Wednesday meetings but not the film shoot itself. A better alternative might be making crew meetings mandatory, with excused absences communicated to and approved by the director also being okay. This would then hold people accountable for the crew meeting times while still providing some flexibility in scheduling.

Another challenge is that crew meetings are run by the directors, so the degree to which the team can bond will be highly dependent on the director's capabilities. Providing a framework for meetings would be helpful, but not the most feasible as different productions run on different timelines. Different crews would require different frameworks, and it is unrealistic to provide a unique framework to every production every week. Mentorship or guidance for quarterly directors from the officer board or from experienced directors might help bridge this gap and ensure that crew meetings properly promote bonding and affective commitment.

7.4 Member Onboarding

The greatest challenge with setting up a cohort program to better onboard new members would be to track who is a part of each cohort. Because there are many options on how to participate in LUX and there is no formal application process to participate, it is near impossible to track who is new each quarter. Some people might come to the first meeting of the quarter and

then never again, whereas others come to their first meeting in the middle of the quarter and are consistent participants each week. Others still might participate every other week, or only on quarterly productions and not at weekly meetings at all. There is no realistic way to group members into cohorts. However, an alternative might be to create a mentorship program so that new students get paired up with an experienced club member to get guidance. Each mentor could potentially support 1-3 students, which would help build mini-cohorts without having to specifically track members, as they can self-identify by signing up for the program.

However, a secondary challenge for a mentorship program would be the willingness of all parties involved to execute it. On the officer board's side, there must be a willingness to facilitate the program, including pairing mentors and mentees, encouraging regular check-ins, and planning any relevant events for the program. On the mentor and mentee side, there must be a willingness to consistently participate in the program over time and regularly check in with each other, which can be difficult to maintain over time. However, with enough nudges from the officer board and the proper pairing and execution of the mentor-mentee pairings, we foresee this program still having enough longevity and success that it improves the integration of new members into the club.

7.5 LUX Knowledge Base

The labor required to compile a knowledge base would be fairly large, so the greatest challenge would be finding someone willing to put in the work and create it. However, LUX already has a "Production Bible" that contains a lot of the information relevant for a knowledge base. While there are many aspects of the Production Bible that need updating, the labor should not be as much of a burden with the support of pre-existing documents and the rest of the officer

team. This knowledge base would require a lot of effort up front to produce, but in years following, the labor would be diminished to just yearly proofreads and updates, which is a vastly smaller amount of effort for a much greater benefit.

Section Eight: Conclusion

Lux Film Production has a lot of strengths regardless of the lower scores discussed. Student members believe in the mission (4.54 out of 5), trust that leadership is setting a positive example (4.42), and would recommend the club to others (4.58). We also got a Cronbach's alpha of 0.965, meaning the data is real and reliable and the issues found were important to address.

We found three problems Lux needed to address as soon as possible. First is the belonging gap. This was the lowest rated item, members were not feeling “part of the family” in the club at 2.79 out of 5. Second is procedural fairness on how scripts get voted on and how complaints against officers get addressed and handled. The last is keeping senior members engaged in the club so filmmaking knowledge doesn't just disappear when they leave to graduate.

The recommendations we proposed are designed to handle all those three issues. Fixing voting and creating an independent channel to handle the fairness issues using procedural justice and trustworthiness. Making crew meetings actually work as well as grouping new members in cohorts handles issues around feeling a sense of belonging, using team processes and organizational commitment. Building a knowledge base fixes continuity issues based on organizational culture and socialization concepts.

If Lux uses these changes, the outcome would be that members will feel more connected to the club. The data shows members connect to the mission, so now what is needed is to make sure that members' belonging matches the strength of its values.

Appendix A – Item-Level Descriptive Statistics

All items rated on a 1–5 Likert scale (1 = strongly disagree, 5 = strongly agree), n = 24.

Question	Construct	Average	St.Dev
I feel a strong sense of belonging to this club.	Affective	3.50	1.10
I feel emotionally attached to this club.	Affective	3.67	1.20
This club has a great deal of personal meaning to me.	Affective	3.71	1.23
I feel like I am "part of the family" in this club.	Affective	2.79	1.32
I enjoy talking about this club with people outside of it.	Identification	4.00	1.18
The values of this club align well with my own.	Identification	4.25	1.03
Being part of this club reflects who I am and what I care about.	Identification	4.00	1.14
I believe in what this club is trying to accomplish.	Identification	4.54	0.78
The relationships I've built here are meaningful to me.	Satisfaction	4.04	1.12
Being part of this club is a meaningful use of my time.	Satisfaction	4.29	1.08
The skills and experiences I've gained here are valuable to me.	Satisfaction	4.46	0.93
I plan to remain an active member next school year.	Satisfaction	4.42	1.18
I would recommend this club to other students.	Satisfaction	4.58	0.88
Club leaders communicate clearly and consistently with members.	Leadership	4.25	0.99

Club leaders listen to member feedback and take it seriously.	Leadership	4.08	1.02
Decisions in this club are made fairly.	Leadership	4.04	1.20
I feel recognized and appreciated for my contributions.	Leadership	3.83	1.13
Club leaders set a positive example for the rest of the members.	Leadership	4.42	0.97
I feel comfortable sharing ideas or concerns with club leadership.	Leadership	4.04	1.08
Members of this club work well together.	Cohesion	4.17	0.96
There is a strong sense of community among members.	Cohesion	4.25	0.74
New members are welcomed and integrated well.	Cohesion	3.58	1.21
Conflicts or disagreements are handled constructively.	Cohesion	4.00	1.02
The club's goals and direction are clear to me.	Cohesion	4.33	0.82

Appendix B – Qualitative (Free-Response) Survey Interview Questions

1. What do you enjoy most about being part of this club?

- “Making new friends”
- “The people and friendships I've made throughout as well as the practical experience.”
- “Nothing”
- “I enjoy the strong sense of shared community and passion for the arts, and it really helps everything we do mean something.”
- “Meeting people and all of the hands-on experience I have gained working on films!”
- “Working on sets, when speakers come to talk at meetings”
- “I like that I get to have hands-on experience with film production, and that I can learn from presenters/guest speakers at meetings. I also enjoy that I get to meet new people through the club and working on new projects”
- “The weekly meetings”
- “What I enjoy most about the club is the people who make it up and how easy it is to talk to members.”
- “All of the good friends I've made throughout being in it.”
- “Being on set”
- “The opportunity to gain experience and network with people who have similar goals”

2. What is one thing that frustrates you or could be improved?

- “Quarterly picks and independent picks seem like a popularity contest rather than based on if the film is good or not.”
- “the people involved treat this club like a high school club. films have major content restrictions and if you aren’t apart of the main clique, good luck getting your film green lit, shown, or being welcomed into the club. you are ostracized if you do not think and act the same way as the main clique that runs this club like a high school dictatorship”
- “People do not read quarterly scripts. They only vote for the ones their friends make, or they simply click what interests them the most. I think it needs to be emphasized that these scripts need to be read to ensure the fairest voting possible. This is something that has frustrated me immensely and I've only pitched for one quarter and still can clearly see it without pitching every quarter.”
- “Maybe a little more focus/information on some of the independent films in addition to the quarterlies. Also the turnaround for reading and voting on scripts always feels very quick.”
- “The voting system for scripts is honestly not great since no one reads the scripts and bad scripts end up passing a lot. People are way too reliant on the pitch. On a less serious note, less emphasis should be placed on the Oscars in icebreakers/trivia even though it is a film club since it’s definitely rigged anyway.”

- “I think sometimes it can feel cliquey, so I think it would be good to encourage people to talk to people they don't know, but of course that's difficult because its understandable that you'd want to only be with your friends”
- “Nothing for now”
- “No notes.”
- “Social dynamics but it’s not rilly the clubs fault”
- “Filmmaking knowledge and experience is lost whenever members graduate. Quality of quarterly films stagnate if alumni never return to mentor newer members. Skills gained by LUX members should be retained in LUX for the next generation to learn.”

3. What (if anything) would cause you to leave the club or become less involved?

- “Lack of organization or if the leaders become self-centered.”
- “I truly can't think of anything I think the club is great.”
- “see answer above. also, super immature. have stopped attending and participating in this club. the final nail was when i sent in a formal report about an officer, and not only did the person not face any consequences, they went on to continue the harmful behavior and still be able to be an officer, and direct/produce films. i was told they would loose those privileges and they didn’t because they are in the main clique of people who run the club like a high school club. i wish there were a more put together, less cliquey version of this club where any kind of film can be made. because of the restrictions, shitty comedies and coming of age stories about white girls in their 20s are the only kinds of films that can be made.”

- “Hopefully nothing, since I doubt things could go south this quickly socially speaking.”
- “If there were too many delulus and if those delulus populated the office board and made delulu decisions”
- “The "Stalker" during the fifth or sixth meeting”
- “Cultivating harmful ideas that affect members negatively, but that goes without saying.”
- “I think somebody would have to really hate me or something and make it really known to the club.”
- “Not being able to get meaningful roles in projects”
- “A paid gig doing the same work elsewhere”

4. If you could change one thing about how the club is run, what would it be?

- “I would change the way independents are picked and I would bring back the yearly”
- “Let us do karaoke sometime! That would be so fun!”
- “less film restrictions and actual repercussions when people bring issues to the officers. i cannot emphasize enough that i made a formal complaint, had evidence and people to back me up, and then the person received no repercussions for their actions and then continued to act in that way. LUX facilitates poor behavior and the officers will never reprimand anything they deem their friends. incredibly unfair to those of us who have been bullied by the officers.”
- “Communicate more with people, whether it be productions or personally if a member is known to be having a hard time.”

- “Take out a lot of the intro slides. There’s literally no need for them except for the beginning of the quarter. Everyone’s eyes are glazing over and there is no need for a film club to be yapping about masks still. It literally has 0 influence in what people do. Have a little more faith in your members. Take out the land acknowledgement but keep the promotion of indigenous media. Everyone already knows the land acknowledgement and it just comes off performative. Also if the yearly was ever brought back, I would do it so each quarter is a different stage of production. In the summer, scripts are written (that way you don’t get complete noobs and freshman either) and the script is chosen during the first meeting or even the week before during the summer. Preproduction happens in the fall. Production happens in winter. When it comes to scheduling actual shoot days, the Wednesday club meeting time could be used to film the yearly, especially since the yearly is meant to be the baby of the club. The only hardcore set roles would be leadership roles and for the yearly, leadership roles would have to be broken down a bit more than they would be for a typical quarterly just to make it more manageable. Smaller roles such as sound, PA, scripty or camera op could rotate or change for every shoot, based on whoever is available for the shoot as the yearly would have to also consider going around the schedules of other productions. That way, it also doesn’t feel like members are iced out from participating on the yearly and it really would become the baby of the club. For scheduling, a time could just be set up and having the whole pool of LUX members would make scheduling a lot easier. Editing would happen in spring.”
- “At the moment I wouldn't change anything.”

- “I truly can't think of anything I'd change in how it's run the ships moving as is.”
- “I wouldn't rllly change anything”
- “There should be a knowledge base of some sort (like a LUX Wiki or even just a list of resources) so that newer members can prepare themselves for a crew position they are interested in. Contributions to the knowledge base should be encouraged and moderated in some way.”

5. Anything else you'd like us to know?

- “Met my girlfriend here and we're about to be engaged so I think you can use that for promotional material haha”
- “this club needs major reform. this is the most unserious, unprofessional environment i have ever been in. my only experiences have been awful and high school- like. it's embarrassing that this is the only film outlet on this campus. i am embarrassed that these are the “filmmakers” i have to be around.”
- “Please emphasize the fact that all pitched quarterly scripts should be treated equally, I CANNOT STRESS THIS ENOUGH.”
- “I have been very lucky to be a part of this club and to find people I resonated with on a personal level.”
- “My answers may not be useful since I'm an alum and don't attend any meetings. I only work on films remotely and don't have any idea how the club is run beyond Slack.”

Appendix C – Notation

- *** $p < 0.001$
- ** $p < 0.01$
- * $p < 0.05$
- $0.05 \leq p < 0.10$
- x_i : a single response
- $\bar{x}$ (x-bar): the mean of all the x values. The bar on top always means "average of."
- $\bar{y}$ (y-bar): same idea, but for a second variable y
- n : the number of responses in one group or sample. For our survey, $n = 24$.
- N : the total sample size across all groups
- k : how many groups are being compared
- p : the number of predictors. (p is not the same thing as p-value)
- Σ : the sum
- s : standard deviation.
- s^2 : variance, which is just standard deviation squared
- σ : same idea as s
- SD_{pooled} : a combined standard deviation when you have two groups
- M_1, M_2 : the means of group 1 and group 2 (e.g., officers vs. members). Same idea as $\bar{x}$, just relabeled to make group comparisons readable.
- Y : the outcome we're trying to predict (eg, "I plan to remain an active member next year").
- $X_1, X_2, \dots$: the predictors (affective commitment, identification, leadership, cohesion).

- R^2 : the share of variation in Y that your predictors explain together. 0 means useless, 1 means perfect.
- t : a test statistic for comparing two means (Welch's) or testing a correlation (Pearson's).
Bigger t = stronger signal relative to noise.
- r : Pearson's correlation, from -1 to $+1$.
- d : Cohen's d , the size of a difference between two groups in standard-deviation units.
- α : Cronbach's alpha, a 0-to-1 reliability score.

Appendix D – Full Survey Response Data

What year are you in school?	How long have you been a member of Lux Film Production?	On average, how often do you attend club meetings or events?	On average, how often do you participate in quarterly productions?	I feel a strong sense of belonging to this club.	I feel emotionally attached to this club.
